THE 2HR AQUARIST

Powerful, visible growth boost.
The ultimate tool to unlock the deepest possible reds
in popular plants.

	 CONVENTIONAL ROOT TABS	 OSMOCOTE TYPE ROOT TABS	 APT JAZZ
 VISIBLE GROWTH BOOST	Average. Helps nutrient deficient plants.	Strong, but terrestrial trace contents may poison aquatic substrate.	Strong growth boost even for the most demanding plants.
 NITRATE LIMITING ABILITY	Weak. Most lack macro nutrients, or do not retain Nitrogen in substrate.	Inconsistent. Depends on the type of slow release coating used.	Strong. Nitrogen retained securely in substrate.
 AMMONIA SPIKE RISK	Low. Most do not contain ammonia based compounds.	High. This triggers algae growth and melt TC and weaker plants.	Low. Superior controlled-release technology.
 IMPACT DURATION	Short. Deficient plants get a quick boost.	Inconsistent. Many last only 2-3 weeks.	Long lasting impact over 2 months.

Overleaf: 1-Ludwigia sp. Red, 2-Ludwigia arcuata, 3-Bacopa colorata, 4-Bacopa salzmannii, 5-Rotala florida, 6-Alternanthera reineckii, 7-Hygrophylla sp. chai, 8-Lobelia cardinalis
